

## HANDBOOK FOR SPACE PIONEERS

A Guide for Pioneers from Earth  
to the eight planets now available  
for colonization

Prepared by L STEPHEN WOLFE and  
ROY L WYSACK

This book will be welcomed by every intelligent person. Pioneering isn't easy. It wasn't easy when the first Europeans hacked their farms out of the cold and dangerous forests of colonial America. Today, it still takes great courage and determination for Humans to forsake all earthly possessions and travel light years to unfamiliar worlds filled with alien life. Yet what choice do we have? Earth is becoming increasingly inhospitable, and many of us must find a new home before it's too late.

And so this Handbook is essential reading for all of us, and you should make sure of your copy as soon as possible. It contains all the vital information you need about the programme of planetary colonization sponsored by the Earth Branch of the Galactic Association of Intelligent Life (GAILE). Its purpose is to detail the programme and supply you with a full – and fascinating – description of each of the planets to which you may emigrate. A preliminary application form is of course included. There are reports from colonists on the creatures and conditions encountered on each planet and what it is like to live there. There are also many useful star maps and other illustrations.

*Just as a star's light shines across the galactic void, the life of its planets transcends individual worlds. Earth's life has outgrown it, sucked dry its resources, polluted its air and water, and crowded its lands from shore to shore.*

*Today begins our migration to new worlds and to a new, fresh, clean life for human kind.*

10½ x 7¼ in / 196pp / illus throughout / appendices / application form
